

# Reliable quality controls

For your diagnostics

## REDx™ (CE)

REDx™ products are unassayed controls that can be used for ongoing external quality control, benchmarking laboratory testing performance, operator training & competency, and end-to-end workflow evaluation.

## PROCEEDx™ (RUO)

Used for assay verification/validation, training, and R&D purposes.

## ONBOARDx™ (RUO)

For assay verification/validation, instrument qualification and operator training. Consists of various PROCEEDx™ samples.

# Quality controls from Microbix to support any laboratory

With the help of External Quality Controls it is possible to find and correct errors in the pre-analytical, analytical, and post-analytical phases of an assay workflow to ensure the delivery of accurate results. The External Quality Controls resemble patient specimens and are prepared and processed according to the diagnostic manufacturer's instructions for handling patient specimens. When used regularly, a laboratory should be able to detect deviations in the assay workflow early on.

Microbix's Quality Assessment Products (QAPs™) portfolio currently offers quality controls under the brands PROCEEDx™, ONBOARDx™ and REDx™, which can be used together with tests for molecular and immunological diagnosis of bacterial, viral and parasite associated diseases in the areas of respiratory infections, gastrointestinal infections, sexually transmitted infections, genital ulcer disease infections, and human papillomavirus infections.

## What are the special features of the Microbix controls?

- In clinically relevant matrix
- Produced from native pathogens when possible
- Very similar to patient samples
- Cross-assay and cross-instrument compatible
- Applicable in conjunction with nucleic acid based and immunodiagnostic assays
- Positive and negative controls available
- Not infectious
- Room temperature stability with the swab based QAPs
- Point-of-Care-Testing compatibility

## Important information on handling Microbix controls

- Stable for up to two years
- Swabs and/or liquid aliquots (ready to use)
- Stored at 2 - 8 °C (vial) and 2 - 30 °C (swab)
